Professional Summary

Software Engineer with 3+ years of experience building and supporting enterprise applications, now bringing that technical foundation into data analytics studies at Sheridan College. Experienced in Python, SQL, production troubleshooting, and working through complex technical problems. Particularly interested in using data to uncover patterns, understand business challenges, and turn findings into practical insights. Through Sheridan Datathon 2026, applied data preparation, statistical modelling, machine learning, and visualization to a financial-resilience platform analysing 4,500 accounts. Seeking a Data Analytics Co-op where technical experience, curiosity, and a collaborative approach can contribute to data-informed decisions.

Technical Skills

Languages: Java, Python, JavaScript, SQL, React, Node.js
Backend & Frameworks: Spring Boot, REST APIs, Microservices
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, CI/CD, Linux
Databases: MySQL, PostgreSQL, MongoDB
Security & Testing: Burp Suite, OWASP ZAP, Metasploit, Nessus, Ghidra, Automated Testing, Vulnerability Management
Data & Analytics: Data Analytics, Data Visualization, SQL, Power Query, Snowflake, Pandas, NumPy, XGBoost, Streamlit

Professional Experience

Engineer — Hughes Systique Corporation (HSC) June 2022 – April 2026
Adobe Client — AEM Screens Platform

Adobe Client | AEM Screens Engineering

- Worked on Adobe's AEM Screens platform as part of the client engineering team, contributing to development, release, reliability, security, and production support across 5+ enterprise customers and 1,000+ active production devices.
- Led cross-platform delivery of AEM Screens Player across Tizen, Windows, ChromeOS, and Android, owning feature delivery, release validation, production issue resolution, and customer deployments.
- Delivered Android and Windows player builds for SG Pools and WMATA, supporting contracts valued at $3M+ while achieving 100% of committed delivery milestones.
- Owned production incidents from detection through root-cause analysis, remediation, validation, and hotfix release, coordinating with engineering and customer teams within SLA windows.
- Built an AI-driven agentic workflow integrated with MCP servers to automate Jira security-ticket generation, reducing vulnerability triage time from 2–3 days to under 10 minutes, a 95%+ reduction.
- Resolved high-frequency blank-screen failures and stability issues, reducing incident reports by 40% and enabling 2x device scaling for existing customers.
- Implemented shared modules and automated testing across multiple player platforms, reducing platform-specific defects by 30%.
- Designed and maintained Jenkins and Docker CI/CD pipelines for AEM-based builds, increasing release frequency from weekly releases to multiple deployments per week.
- Identified and remediated security vulnerabilities across AEM on-premises and AEM as a Cloud Service environments, supporting client security audits and improving deployment security.
- Partnered with Adobe engineering groups, product managers, and customer IT teams to troubleshoot production issues, validate deployments, and drive releases to completion.
- Performed end-to-end QA and release validation, identifying critical defects and security vulnerabilities before production.

Senior Associate — Genpact November 2021 – June 2022

- Developed 3+ production-ready Spring Boot and microservices applications within the first 3 months of onboarding.
- Built RESTful microservices supporting 10K+ monthly API requests within a distributed enterprise system.
- Collaborated with a 6-member Agile team on API design, unit testing, defect resolution, and sprint delivery.
- Contributed to AWS and CI/CD workflows for automated build and deployment processes, improving build and deployment consistency across development environments.

- Participated in code reviews, debugging, integration testing, and production support activities while working within Agile sprint cycles.

Education

Applied Data Analytics and Visualization 2026 – Present
Sheridan College, Mississauga, Ontario, Canada

Sheridan Datathon 2026 – Resilience Rewired
Developed a financial analytics platform analysing 4,500 customer accounts using Python, SQL, Snowflake, XGBoost, and Streamlit. Built predictive models, interactive dashboards, and financial stress simulations. Achieved 0.977 ROC-AUC with the XGBoost model on the documented test set.
Project: GitHub Repository | Live Demo

Bachelor of Computer Applications GPA: 8.7 | Sep 2021
Sant Baba Bhag Singh University, Jalandhar
Published "Approach to Real World Hacking" (2020), a practical guide covering fundamental cyberattacks and penetration testing.

High School GPA: 8.0 | Jul 2018
Jawahar Navodaya Vidyalaya, Hoshiarpur

Certifications & Recognition

- CompTIA Security+ CE Certification
- Cyber Attack Countermeasures — New York University (NYU)
- Hall of Fame recognition in Cisco and Lacework Vulnerability Disclosure Programs.
- Letter of Appreciation from CaratLane (a Tanishq Partnership) for identifying a critical payment bypass vulnerability.
- Recognition from 5+ e-commerce platforms for responsible vulnerability disclosures.

Additional Achievements

- College-level medalist in technical competitions, including first-place finishes in C programming, coding challenges, and design contests.
- Inter-school basketball champion, demonstrating teamwork, discipline, and leadership.
